

CHRISTOPHER'S MEADOW

CLIENT: ASHCOURT HOMES

VALUE: £3.2M

THE PROJECT

This scheme entailed the Design & Build of 21 new 3, 4, & 5-bedroom detached dwellings along with the associated hard and soft landscaping, services, roads, footpaths and sewers located in West Butterwick, North Lincolnshire.

Properties ranged in value from £215K to over £500K and were offered with extensive choices for the internal finishes, kitchens, and bathrooms along with upgrade options.

The construction of the dwellings incorporated timber frames for enhanced thermal characteristics; built off concrete ground beams supported by driven concrete piles due to the ground conditions.

The dwellings easily achieved the current stringent Building Regulations without the need to incorporate low to zero carbon technologies due to Ashcourt's "fabric first" approach to construction.

DIVISIONS INVOLVED

Civil Engineering

Aggregates

Construction

Concrete
