

DALTON GATES

CLIENT: WARTER PRIORY ESTATES

THE PROJECT

Ashcourt were the principle contractor for the entire construction of the Woodchip Bio Mass plant at GB Bio in Hull.

Our team at Ashcourt had the responsibility of providing land surveys, structural advice as well as being the sole supplier of concrete for the project. Tanstern Bio Mass required a 1300 meter long access road 7.5 meters wide, concrete for foundations for the Air cool condenser and boiler module. The project also required foundations for a 105 meter long woodchip storage barn all of which Ashcourt Construction were able to assist with.

In total, Ashcourt supplied approximately 5000m³ of concrete from our concrete production facility in Hull.
